

First.

**Clean your android,
This makes her easier to work
effectively on combat.**

**Temperature is very important
for your android.**

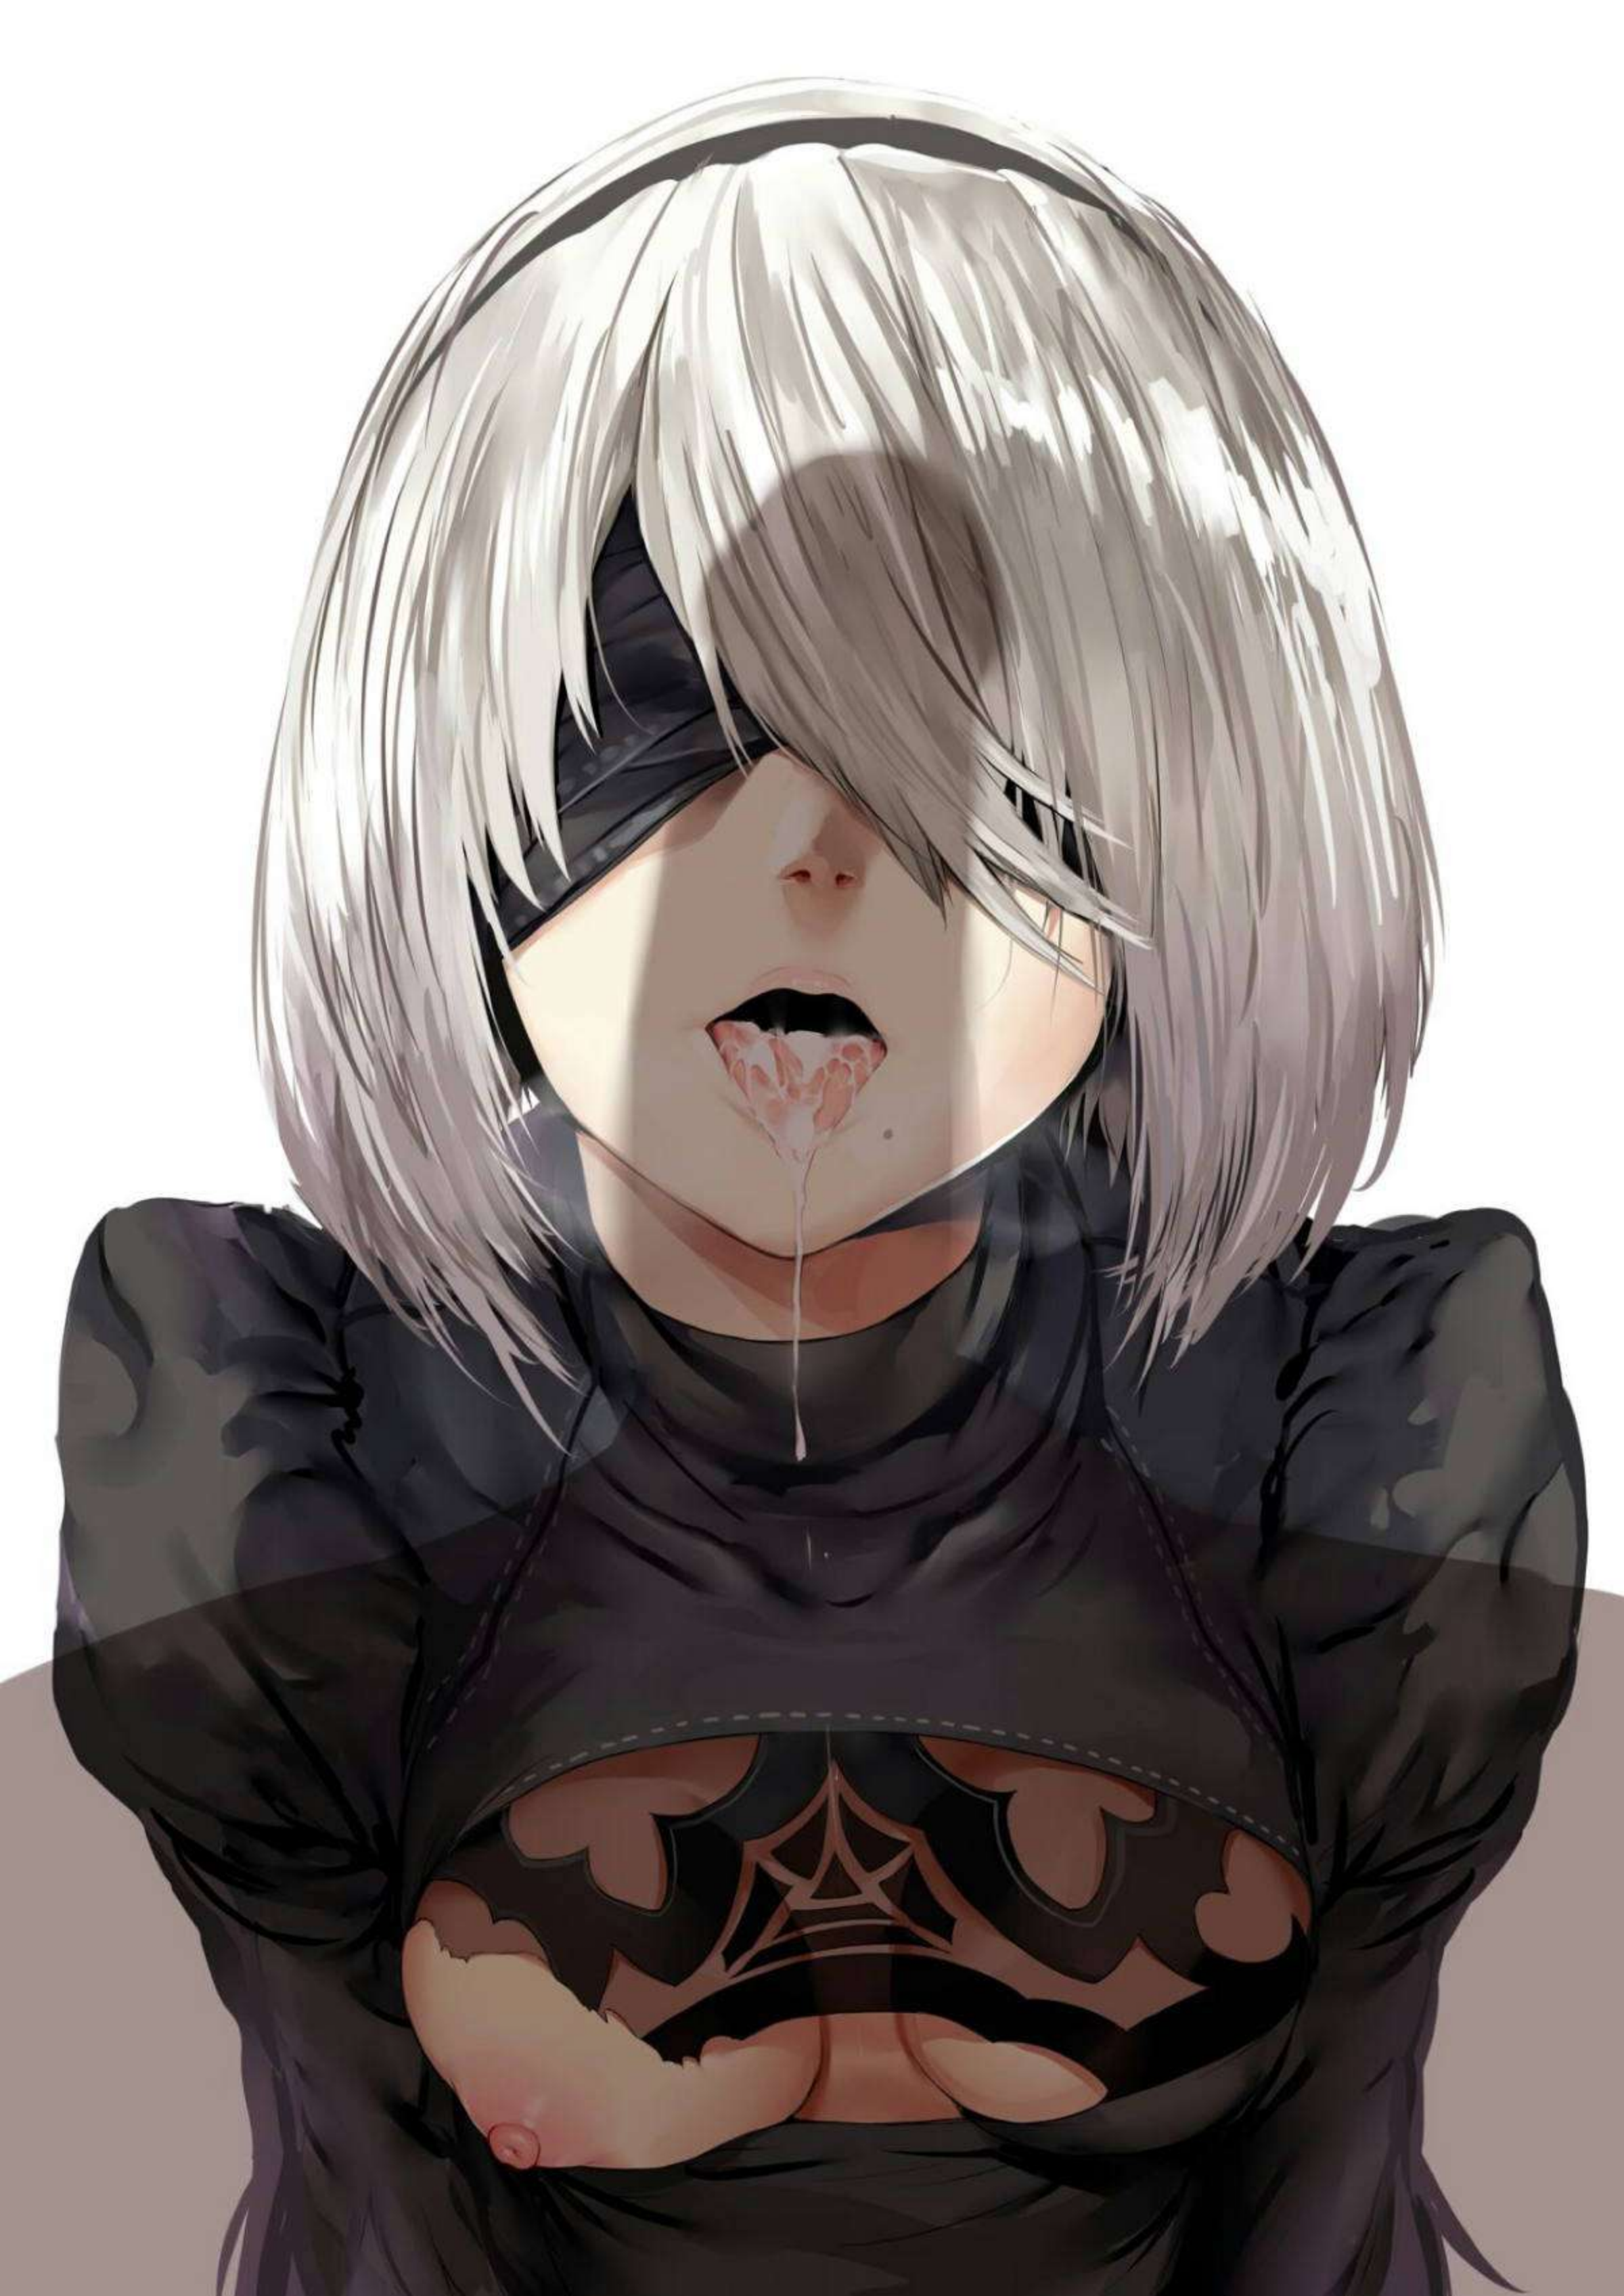

2nd. (Optional)

Feed her protein. Its easier
to use your own protein for her...
It is more efficient that way.

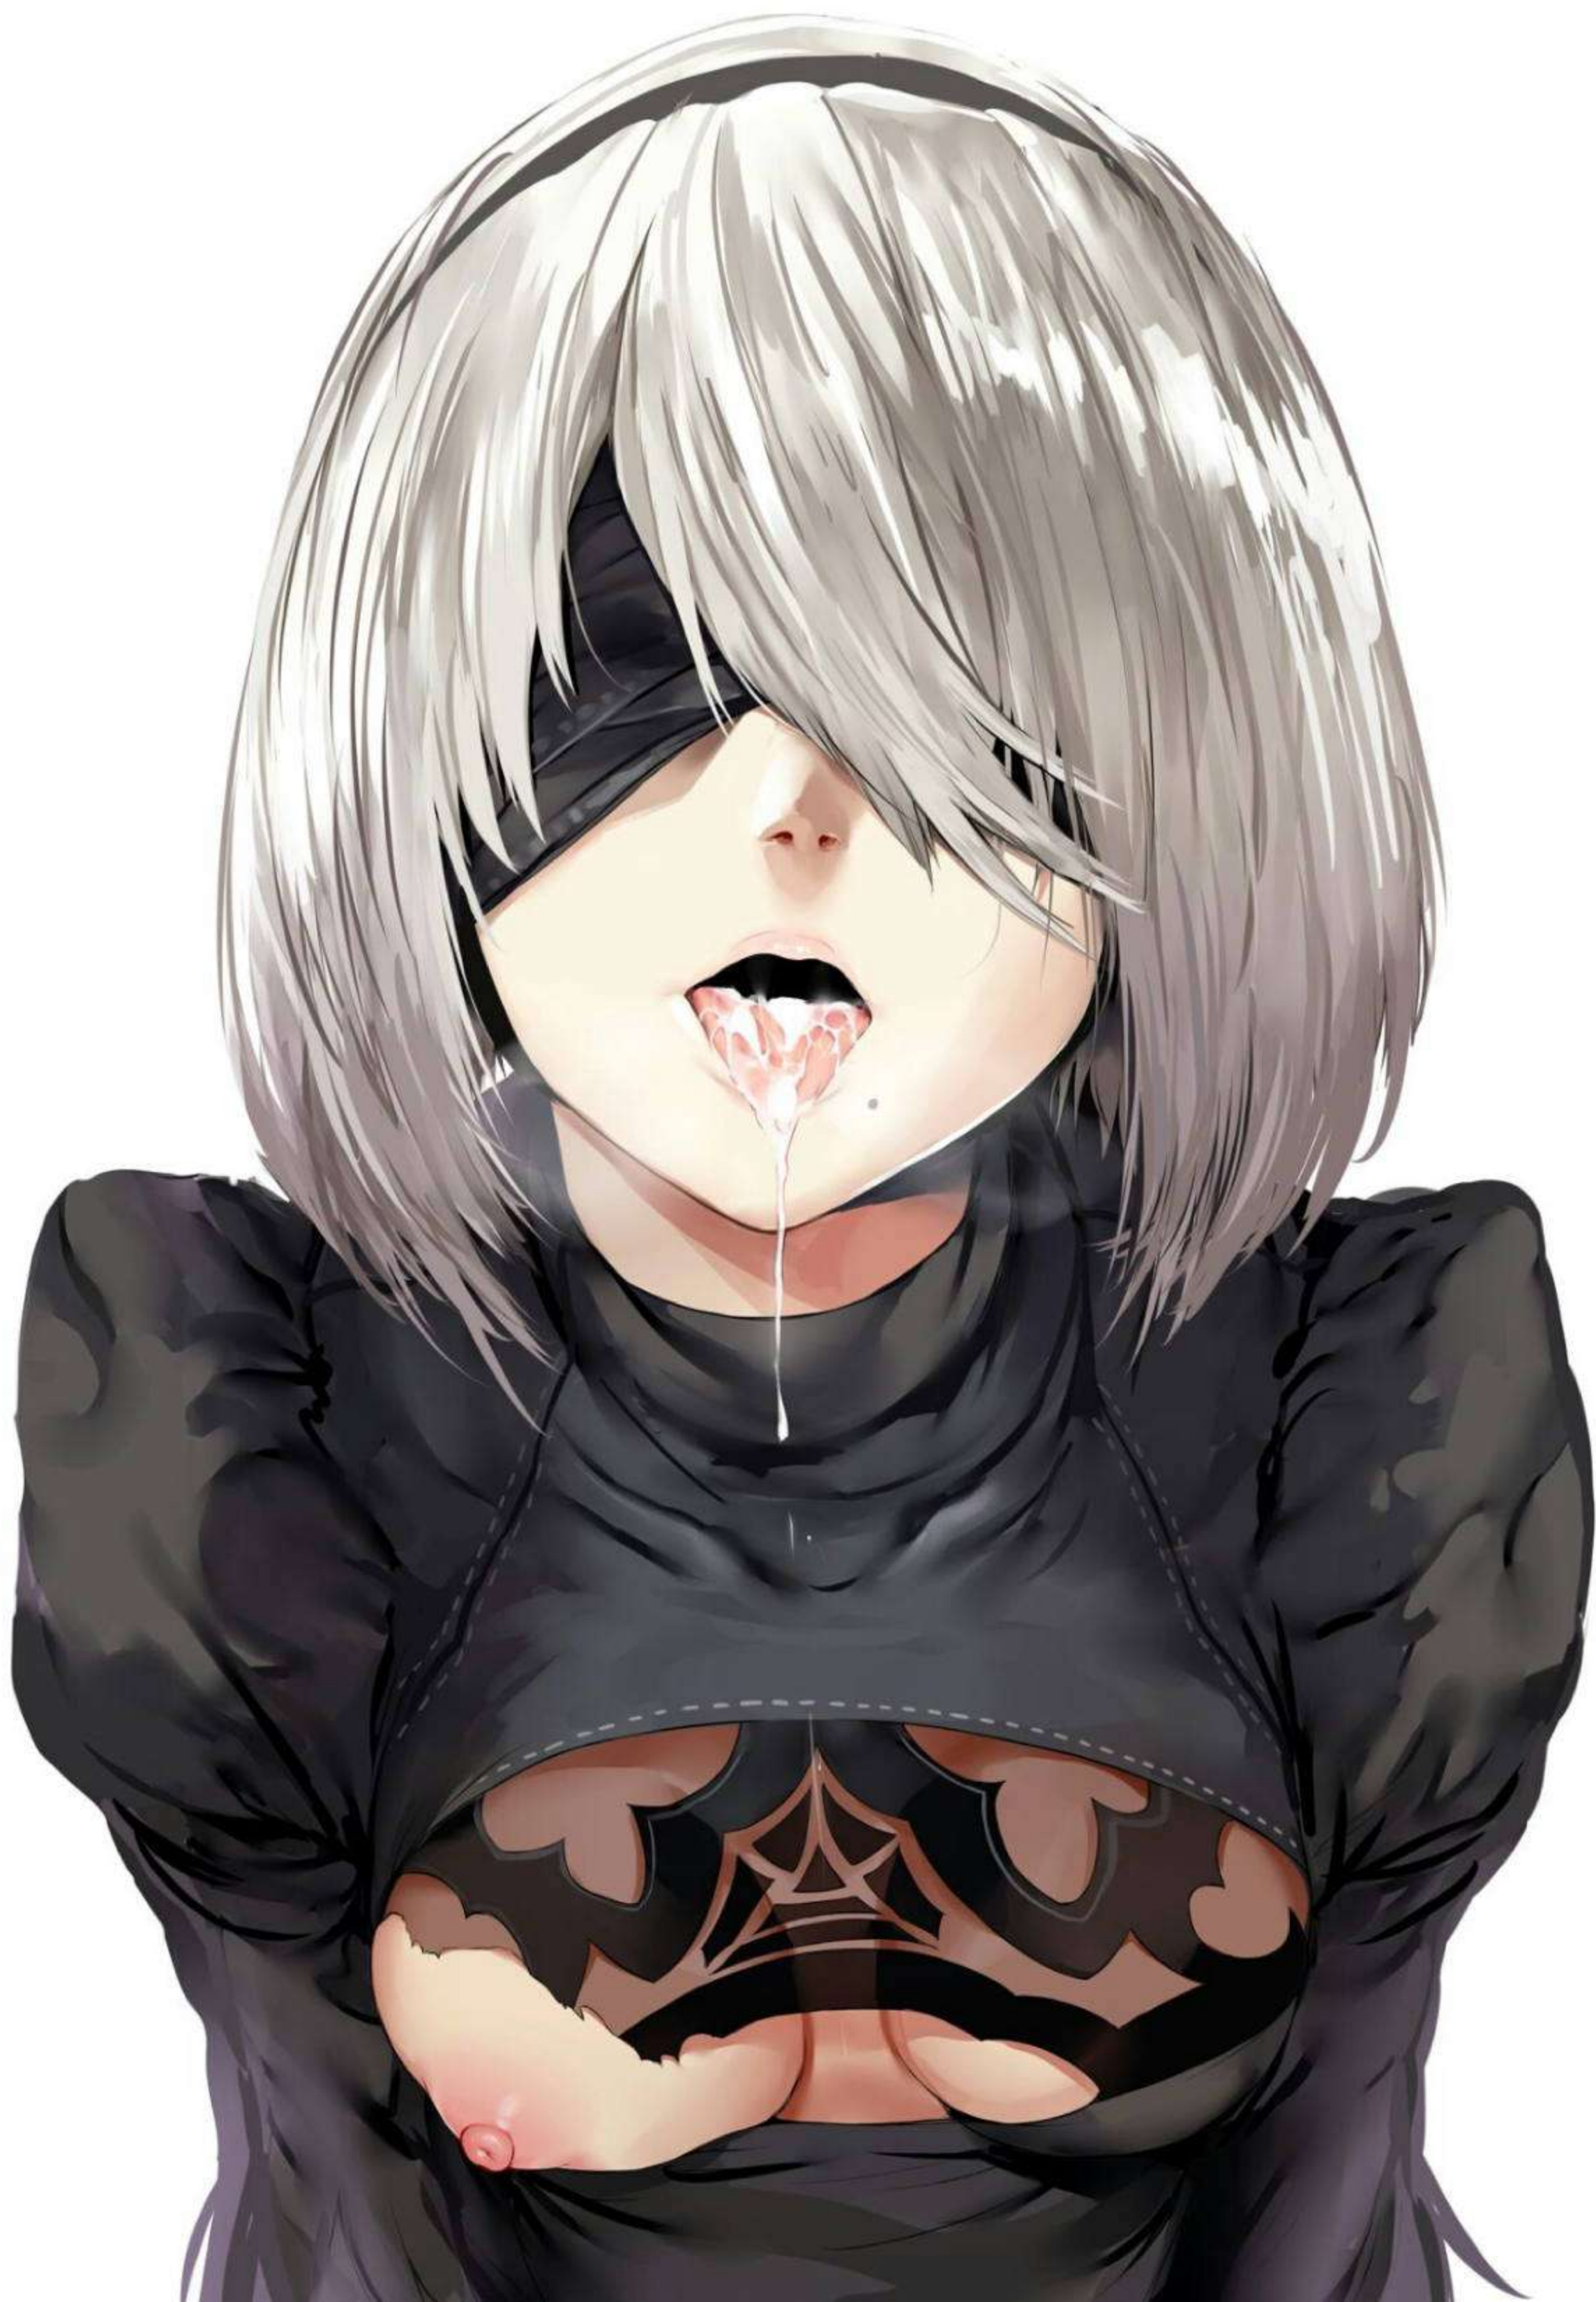

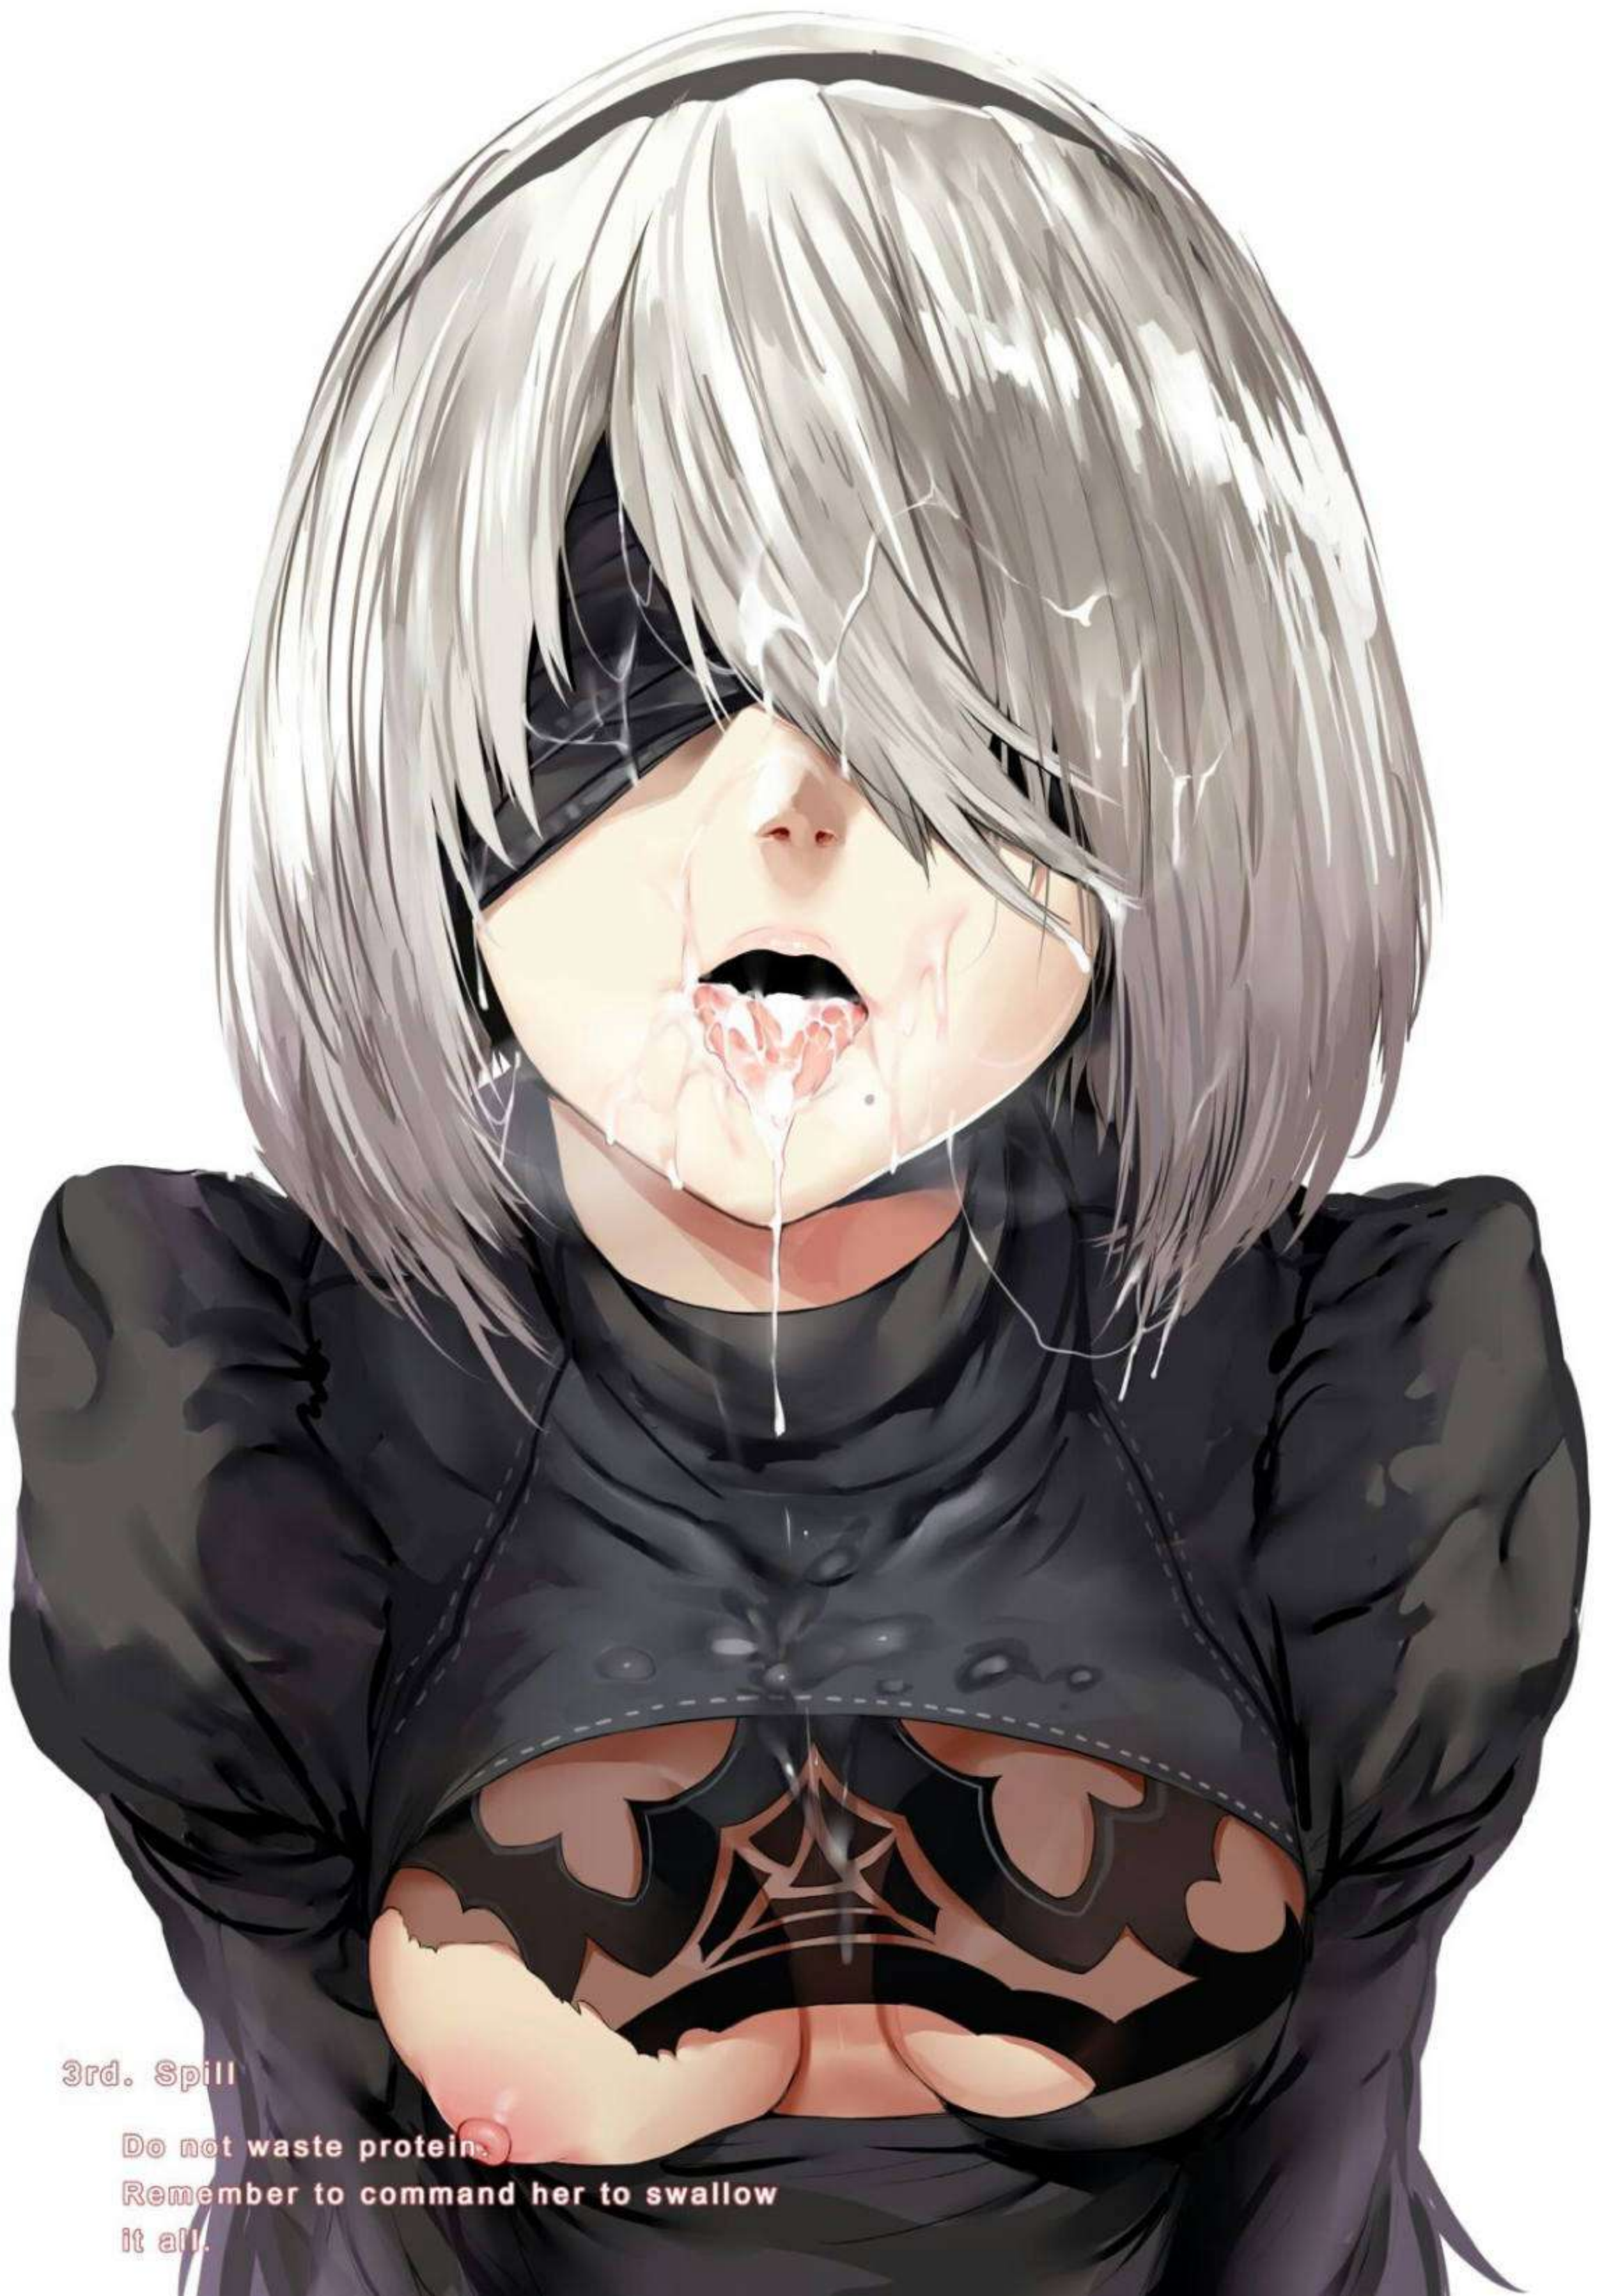

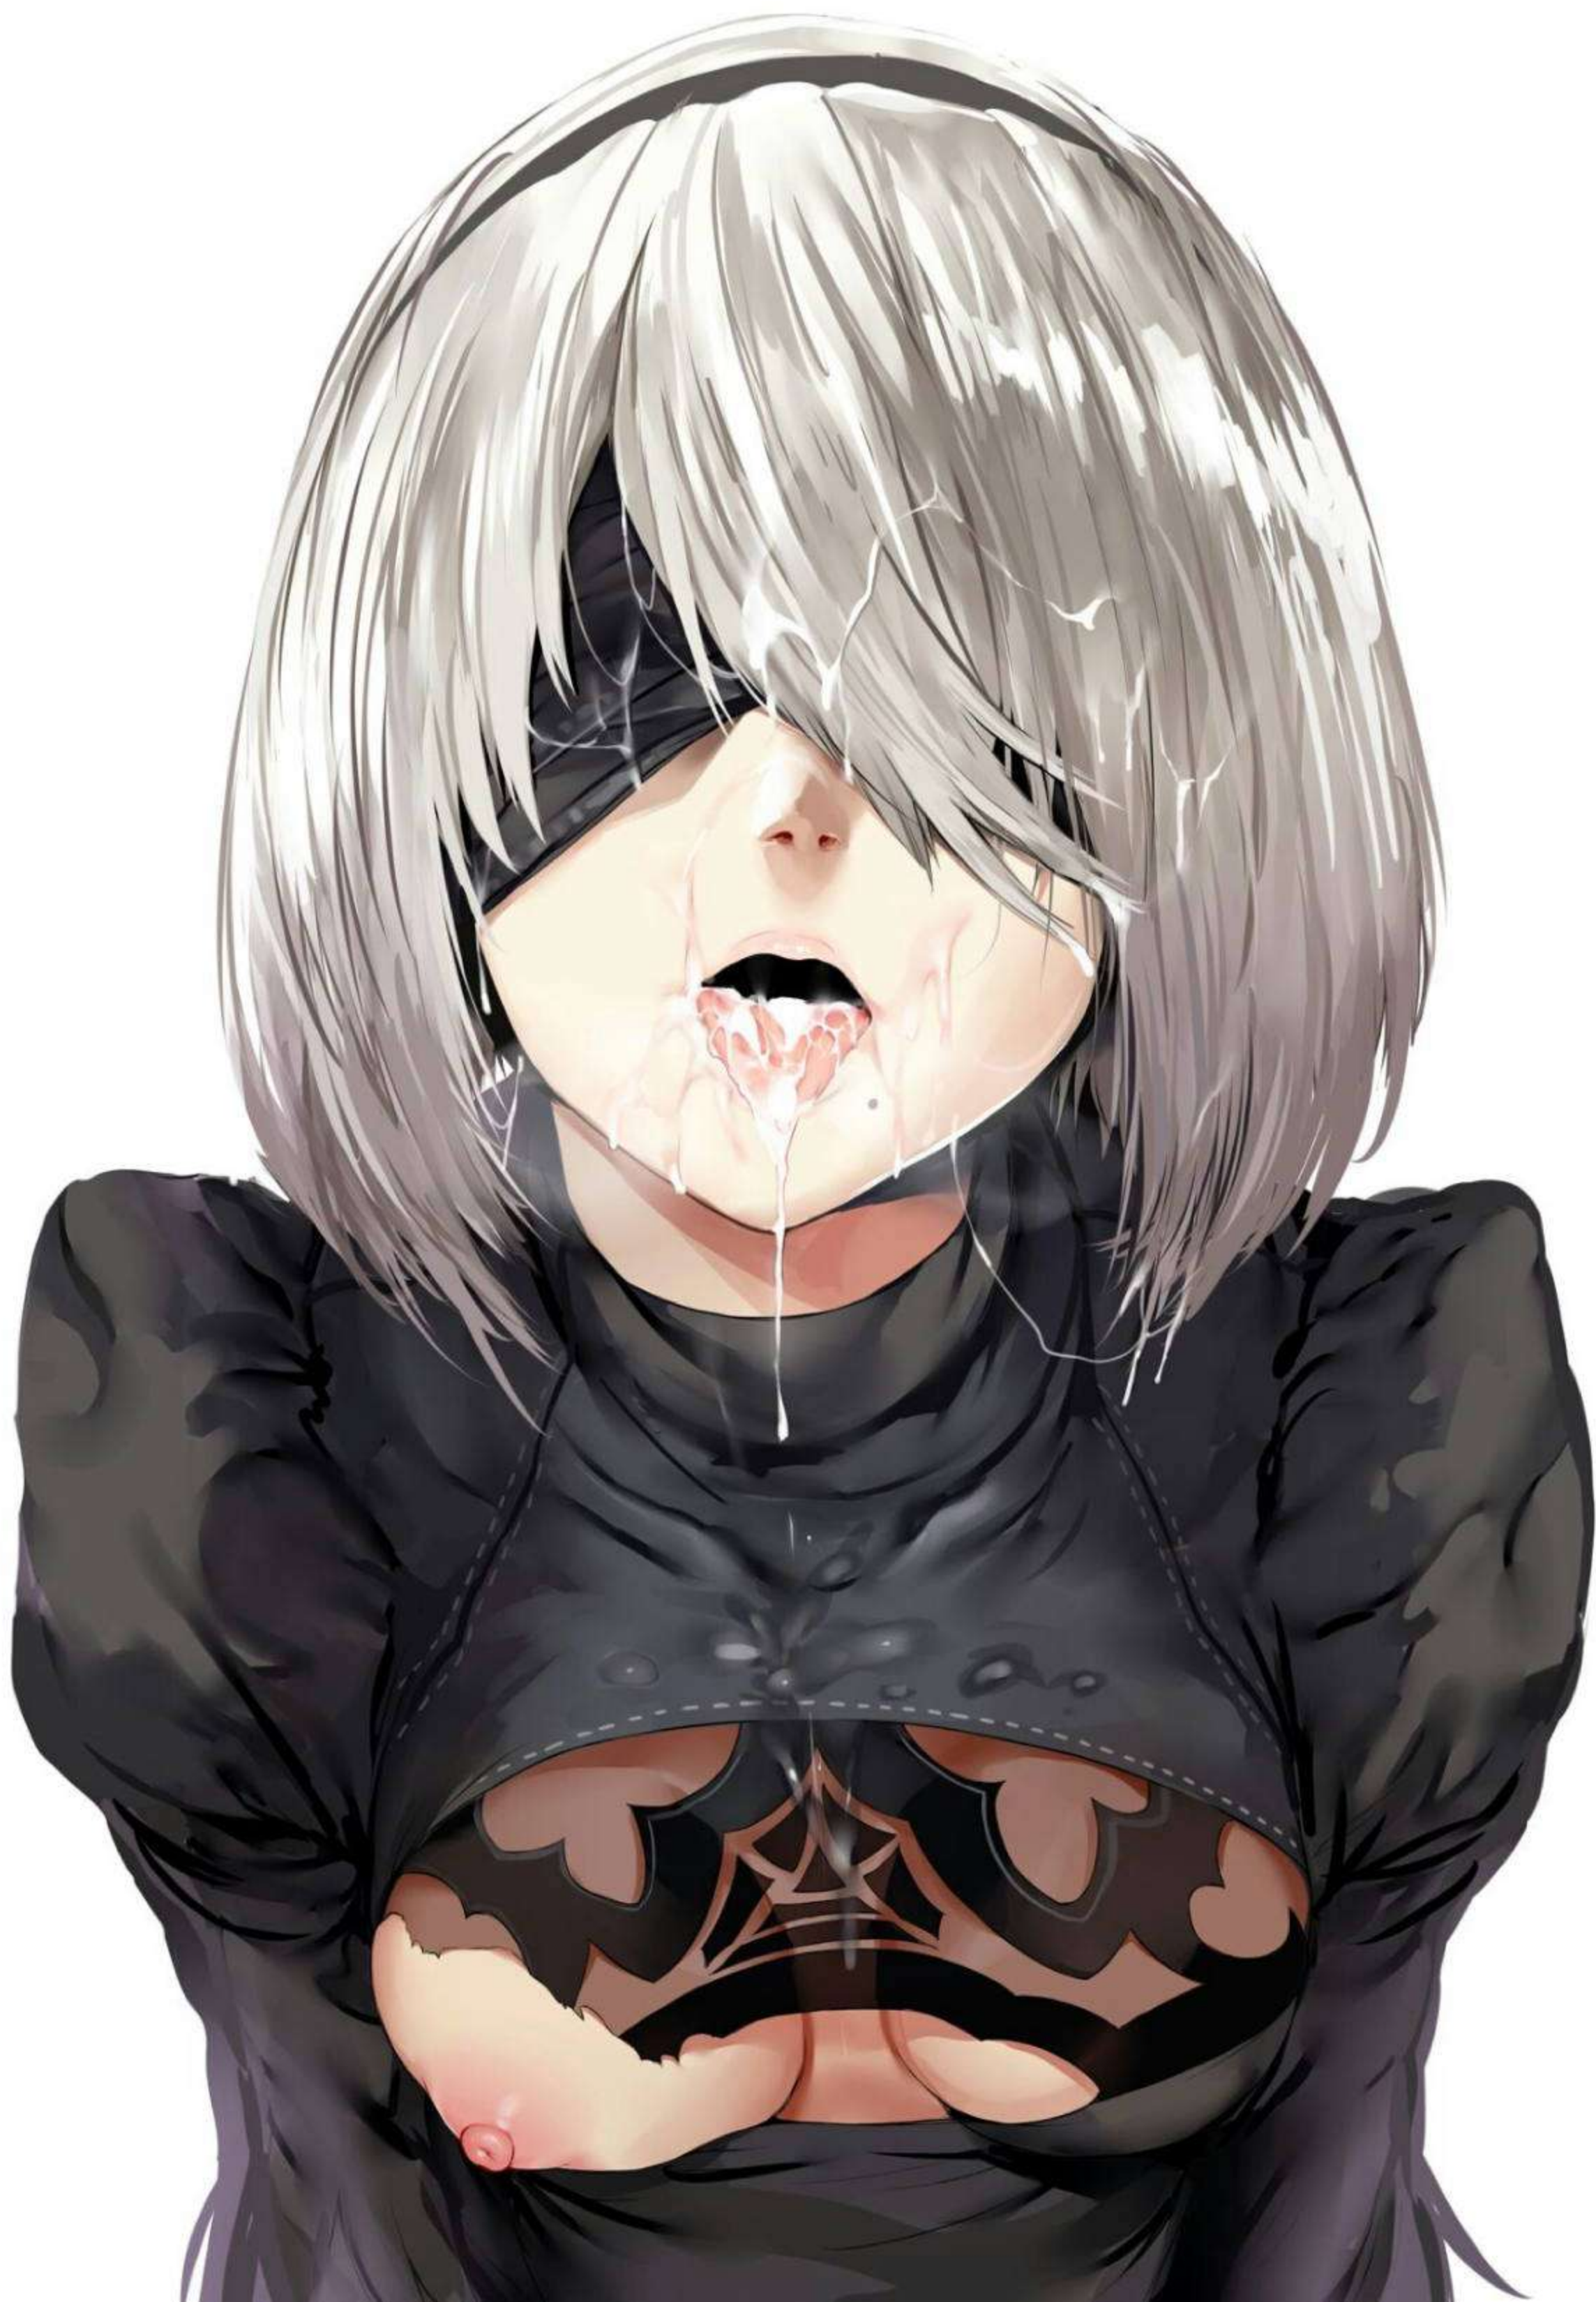

3rd. Spill

Do not waste protein.
Remember to command her to swallow
it all.

4th. Observe her Combat

See if she acts abnormal from below.

5th. Rear Engine

Sometimes it overheats so make sure to observe it well.

6. Give her protein directly when on sleep mode

this gives her a boost at next battle so if you
wanna take care of her more, be sure to do it once a week.

An illustration of a character's lower back and buttocks. The character has a dark, possibly black, top with a decorative, zig-zag pattern along the edges. The buttocks are large and rounded, with a light skin tone. The character is wearing dark, possibly black, shorts or leggings. The background is a plain, light color.
