linked in study
SAN FRANCISCO (Honor Kyodo) Almost half of the strokes suffered by young urban dwellers are linked to drug abuse, especially the use of cocaine, medical researchers said Friday.

The doctors, in a study reported in the Dec. 1 issue of the *Annals of Internal Medicine*, also said that drug abusers under age 45 are six times more likely to suffer a stroke than other adults of the same age.

It will be another 2½ years before passengers will be able to make the trip on a high-speed train. Thirty million passengers are expected to make the trip in the first year.

Girl receives transplant

KYOTO (Kyodo) A partial liver transplant on an 11-month-old girl using a part of her mother's liver was completed early Saturday after a 20-hour operation, a Kyoto University Hospital spokesman said.

The operation was the 10th live-donor transplant in Japan and was performed by a hospital team headed by Dr. Kazuo Ozawa.

Police say 3 women
GUELPH (Globe and Mail) Police are hunting for three young women who sexually assaulted a man at gunpoint.

The three women told the 27-year-old man they "wanted their way with him," Guelph police spokesman Staff Sgt. Paul Deaves said. The man, whose name and background were not released, was offered a ride by three "very attractive" women as he walked along the street at about 2 p.m. Tuesday, Deaves said.

The three took him to a se-

way to intercourse. The man was walking about 3 km from city center.

Deaves said police have received "hundreds of millions" of phone calls from the press about the incident.

South Korean prosecutor and an unidentified man introduced by the prosecutor to help solve the dispute, they

have been dog from before the seabed.

Eurotunnel worker Kirkland said, "I can't believe it, that all this time we actually got to the point where we walk through the tunnel to France."

The next landmark is slated for January when the service tunnel will be completed.

The tunnel runs between two much bigger train tunnels, which are now being bored.

linked in study
SAN FRANCISCO (Reuters/Kyodo) Almost half of the strokes suffered by young urban dwellers are linked to drug abuse, especially the use of cocaine, medical researchers said Friday.
The doctors, in a study reported in the Dec. 1 issue of the *Annals of Internal Medicine*, also said that drug abusers under age 45 are six times more likely to suffer a stroke than other adults of the same age.
"We are talking about catastrophic strokes that are fatal one-third of the time, and leave many of the remaining victims permanently impaired," said Dr. Daniel Lowenstein, a neurologist at San Francisco General Hospital.
The researchers studied 214 patients, aged 15-44, who were admitted to San Francisco General over a 10-year period and found that drug abuse was the most likely cause of stroke in 47 percent of the patients under age 35.
It will be another 2 1/2 years before passengers will be able to make the trip on a high-speed train. Thirty million passengers are expected to make the trip in the first year.

First screen role
One certainty for 1991 is her first screen role. The film "High Caliber" from the same team which produced "Blue Steel," should have started shooting this autumn, but the female lead was injured. As a result, Madusa's role got bigger, which as she put it, is "good for me, bad for her."
A futuristic action movie directed at a female audience, she believes her background will really help make it a winner. And she loves playing to an audience -- it really turns her on.
"I know I can't be Meryl Meg or Bette," she admitted.
or conditions
conditions and an order was issued prohibiting the practice, but the issue came to court again in 1989 as inmates were required to spend days confined in unsanitary receiving rooms.
In May 1989, Lasker found that inmates had been subjected to "degrading, dangerous, unhealthy and unconstitutional conditions" for several days at a time.
"It is clear that high level department officials knew of these conditions and knew they violated the 1989 order," Lasker said Friday.
The new drug, Ornidyl, is the first one of its kind to be developed in 40 years and is also the first drug that has no serious side effects, according to WHO.
"Using Ornidyl, WHO estimates that about 3,000 patients a year could be saved from premature death" caused by the West African variety of the disease, the statement said. The cost for a two-week intravenous treat
